JonatanKoren

jonykoren

Interests

- Deep Learning
  - Especially Computer Vision
- Machine Learning
- Data Mining
- Data-Driven Analytics

Programming Skills

- Python
- R
- JAVA

Frameworks

- Tensorflow, keras, pytorch
- bash, slurm HPC

Languages

- Hebrew
- Spanish
- English

Summary

I am 28 years old, currently living in Haifa, and open for data science jobs all around Israel. I am ambitious, and dedicated to the task and process, from beginning to end and love spending time every day learning more about AI.

Education

Sep 2019 – Sep 2020 **MSc. , Intelligent Interactive Systems** Universitat Pompeu Fabra

- Main Fields: Machine learning, deep learning, data mining and web intelligence, natural language, autonomous systems, data-driven analytics, computational semantics
- Master's Thesis: Using deep convolutional networks to improve malignancy prediction in CT scans

Oct 2015 – Aug 2019 **BSc , Industrial Engineering & Management** Ariel University

- Specializing in Information Systems
- Final Project: In-depth business analysis through building business models and developing internal management automation tools

Accomplishments

Aug 2020 **Deep Learning Spcialization** deeplearning.ai

- Main Fields: hyperparameter tuning, regularization, optimization, structuring machine learning projects, CNNs and sequence models

Jun 2017 **Victory in Machine Learning Competition** CS, Ariel University

- Prediction of credit buying by customers in Santander bank

Projects

Instance Segmentation **Improve malignancy prediction in lung CT scans**

- Classification, localization and instance segmentation of pulmonary nodules in the lung tissues

Object Detection **Custom SOTA object detection**

- Automatic state-of-the-art object detector for custom dataset

Image Classification **Improve fractures prediction in skull CT scans**

- Classify skull CT scans as fractured or not

Image Classification **BMI Classifier**

- Mining data and dataset creation, deep NN classifier that distinguishes between different BMI types of people

Data Driven **Deep analysis of real web application**

- Data-driven social analytics deep analysis of a real web application for further business modelling
